

React JS Coding Task

Instructions for the task:

1. Work in a new [GitHub](#) public repository.
2. Create a new branch test-task and work in it. Make Pull Request from test-task to main branch.
3. Make regular meaningful commits to Pull Request.
4. Submit the Github link of the repository & a short screen recording of the working application.

(⌘ S)

- 1) Using [ReactJS](#) , create a form for a New Receipt with the above fields.
- 2) When **SUBMIT** button is clicked, using React Hooks, save the new receipt in an array.
- 3) Show the list of receipts in a table below the form.
When a new receipt is added in the array, the list should be updated, displaying the new receipts.
